

Prateek Singh

Full Stack Web Developer

@ devxprite@gmail.com <https://linkedin.com/in/devxprite> <https://devxprite.github.io> Kanpur

SUMMARY

I'm a Full-Stack Developer who enjoys working with the MERN stack and Next.js. I like building web apps that look good, work fast, and are easy to use. I've got hands-on experience with APIs, state management, and creating stuff that solves real problems.

EXPERIENCE

FrontEnd Developer

CybeReconn

08/2023 - 04/2024 Remote

- Built responsive web applications using Next.js and Tailwind CSS, ensuring compatibility across browsers and devices.
- Enhanced application performance React Query for efficient state and data management.
- Integrated RESTful APIs with frontend components, reducing data fetch times through optimized workflows.

Full Stack Web Developer (Internship)

Bharat Tech

11/2022 - 05/2023 Remote

- Developed web applications with React.js and Next.js, improving load times with server-side rendering.
- Implemented secure authentication using NextAuth, strengthening user access controls.
- Integrated third-party APIs into web applications to enhance functionality.
- Streamlined database operations by integrating Prisma ORM with MongoDB.

EDUCATION

Bachelor of Computer Applications

Dr. Virendra Swarup Memorial Trust Group of Institutions

06/2021 - 06/2024 Kanpur

GPA

7.2 / 10

SKILLS

JavaScript TypeScript Next.js React Tailwind Express GraphQL AWS Prisma NodeJs Git
MongoDb Firebase Redis Figma Java Ubuntu PostMan

PROJECTS

PollPower

<https://www.pollpower.site>

This is a voting app I built from scratch using Next.js, Tailwind and Prisma. It's like a simulator where people can vote through a virtual EVM, just like in real elections, and see live results as they come in.

GitGlance

<https://gitglance.vercel.app>

A GitHub profile analyzer made with React and Tailwind CSS, using GraphQL API to show stats like repos and contributions in a clean dashboard. Kept it fast and visually neat. It's handy for developers who want a quick snapshot of their GitHub presence without digging through the site.

Chat World

<https://chatworld.vercel.app/>

It's a real-time chat app created with TypeScript, React and Firebase. I used Firebase for the real-time messaging part, which keeps everything synced instantly, and threw in a simple design with Tailwind CSS to keep it lightweight.
